# HEAL Program Quality Framework

The HEAL Program Quality Framework is underpinned by the best evidence models used in the development and evaluation of education and training. These include:

- The Analysis, Design, Development, Implementation and Evaluation (ADDIE) instructional design systems framework [1]
- Kirkpatrick evaluation model [2] and the
- Plan, Do, Study, Act (PDSA) cycle. [3]

The culmination of these models has informed the HEAL Program Quality Framework represented in the following diagram.
